Nov 2016

Microsoft

Ticket System

Tech Stack: MongoDB, ExpressJS, React, Redux, Tailwindcss

- Personal Project
- A full-stack project with a JWT-based authentication system
- Users have 2 roles i.e. “user” and “dev” where the user can raise a ticket and the dev can update the ticket to different states like “Pending”, “Under Review”, and “closed”.
- the user and the dev can add corresponding messages for every ticket to track the steps taken before closing the token.
- Deployed the complete application Heroku.
